NICE TO KNOW

Spline drive

Spline drive is designed to service spline fasteners. They can also be used instead of a conventional socket on conventional 6 point, 12 point fasteners, Torx and XZN.

- **On conventional fasteners:** spline drive is suitable for use on 6 point, 12 point fasteners, Torx and XZN fasteners. The contact between the splines and the flat part of the fastener is away from the corners of the fastener helping to prevent FOD caused by fastener rounding and scoring.
- **On spline fasteners:** spline drive on spline fasteners help deliver twice the torque of 12 pt. wrenches on double hex fasteners, helping tighten high strength bolts to high torque loads. Spline helps reduce foreign object debris (FOD) by forcing a precise fit between the fastening tool and the fastener.

By moving the torque load away from the corners, where the fastener is weakest, spline drive also help provide more torque than hex drive on hex fasteners.

Additionally, since the contact between the fastener and the socket is away from the corners, spline drive can also be used to turn fasteners with damaged corners.

Surface drive

Surface drive sockets are designed to retain contact with flat sides of the nut to transmit high torque and reduce nut wear. These sockets are ideal for use on polished nuts, aluminium nuts and nuts with worn-out points.
